

## PROSERIES® LITTER HARNESS

This fully adjustable litter harness intended for use with a rigid litter features parachute buckles on each of the four legs. This allows them to be adjusted independently, so the litter can be quickly and easily set at the best angle for condition or patient comfort. A heavy duty O-ring is used for the top tie-in point and a 10-ft (3-m) tender line (CMC Static-Pro Lifeline) and a nylon storage bag are included. Carabiners not included.

The ProSeries® Litter Harness is now certified to NFPA 1983 (2017 ED), Auxiliary Equipment, General Use, 76 kN MBS.
